

Victor Urdaneta

Winter Park, FL 32792 | 407-218-9915 | vurdaneta851@gmail.com | [Portfolio](#) | [Github](#) | Bilingual: Spanish & English

Education

University of Central Florida – B.S. Statistics - Expected Dec 2026

Relevant Coursework: Statistical Learning, Machine Learning Algorithms, Data Management (SQL), Applied Time Series, Mathematical Modeling of Data.

Valencia College – Associate in arts, 2024

Technical & Analytical Skills

Python (Pandas, NumPy, scikit-learn, matplotlib, R (ggplot2, statistical modeling), SQL; Regression, Decision trees, Clustering & PCA analysis, Deep learning, Time series analysis, Hypothesis testing, Bayesian inference, Survival analysis; Excel (advanced formulas, pivot tables, data analysis), Git, Linux, Data visualization workflows.

Sports analytics projects

Pitcher's WAR Analysis - [View project here](#)

- Developed predictive models to analyze pitcher's WAR using 2024 regular season MLB data.
- Quantified impact of core pitching metrics (ERA, WHIP, FIP, W) on overall player value.
- Cleaned and structured 2024 MLB data using Python/pandas to ensure accurate analysis
- Developed predictive models (Regularized regression, XGBoost) to evaluate player contributions.
- Visualized performance metrics to inform data-driven player evaluation and scouting decisions.

F1 Performance Analysis – [View project here](#)

- Analyzed post-2014 F1 driver and team performance to identify patterns and predict season outcomes.
- Collected, cleaned, and joined multi-source F1 datasets using SQL to ensure accurate and consistent race-level context.
- Engineered advanced metrics including high-altitude success, finish volatility, driver-vs-team performance, top-10 rate, and team average position.
- Built predictive models in Python to evaluate driver skill, team impact, and race-specific factors, producing actionable insights for performance analysis.
- Visualized trends, relationships and distributions of engineered metrics.

Experience

Attraction Attendant — Universal Orlando Resort

Oct 2023 – Present

- Operate in highly active environment requiring real-time decision making and monitoring of operational metrics.
- Coordinate with team members to manage operational flow efficiently.
- Deliver consistent service quality while managing multiple constraints
